Lapiss
TOOTH WHITENING SYSTEM

 **DHARMA**
RESEARCH
5220 N.W 72 Avenue, Unit 15, Miami, Fl. 33166 • 1-877-833-3725 • WWW.DHARMARESEARCH.COM

Lapiss CP and Lapiss HP are advanced, high performance take-home whitening gels with viscosity and a neutral PH to ensure the full release of the peroxide without jeopardizing patient comfort.

Both systems have the perfect combination of soothing agents, conditioners, desensitizers and high water content to help minimize sensitivity and the formation of plaque and tooth decay is significantly reduced.

Both formulations contain fluoride, potassium nitrate and tri calcium phosphate (TCP). Both deliver effective whitening while rebuilding enamel, reducing shade relapse, improving luster and minimizing sensitivity.

Key Features:

- **High Water Content**
The high water content of the gel reduces dehydration of the tooth enamel and decreases patient sensitivity.
- **Soothing Agents and Conditioners**
These special additives minimize plaque formation, enhance remineralization and prevent shade elapse.
- **Fluoride Releasing**
Fluoride remineralizes the enamel while assisting in reducing post-operative sensitivity.
- **Tri Calcium Phosphate (TCP)**
Proven to reduce sensitivity, deliver enamel protection, and help improve the luster and smoothness of teeth.
- **High Viscosity**
The sticky, viscous gel ensures that it can be easily and securely place into the trays and that it remains inside the trays for the entire procedure.
- **Desensitizing Agent**
Lapiss CP and Lapiss HP contain potassium nitrate which is a proven effective desensitizer. It acts on the nerve endings and desensitizes them minimizing sensitivity and maximizing patient comfort.
- **Neutral PH**
Both have a neutral PH to ensure the full release of the peroxide without jeopardizing patient comfort.
- **Flavors**
The specially formulated flavors, mint and strawberry, are both pleasant, fresh and long lasting.

Key Benefits for Patients:

- No chair time required.
- Custom Trays precisely fit and whiten all teeth evenly.
- More affordably priced.
- Multiple concentrations available to best meet their needs.

Lapiss CP Carbamide Peroxide Gel

- **16% Concentration:**
 - Ideal for mild to moderate stains.
 - Ideal for yellow extrinsic stains and patients with a history of thermal sensitivity.
 - Recommended Treatment: 90 minutes to overnight.
- **22% Concentration:**
 - Ideal for severe stains and heavy tobacco stains.
 - Ideal for patients with a minimal history of thermal sensitivity.
 - Recommended Treatment: 60 minutes to overnight.
- **30% Concentration:**
 - Ideal for tetracycline stains, fluorosis.
 - Ideal for patients with no history of thermal sensitivity.
 - Recommended Treatment: 30 minutes per day.

Available in the following presentations:

- **Standard Kit:** 5 x 3ml Syringes, recappable tips, tip case, tray case, 2 EVA sheets and a shade guide.
- **Mini Kit:** 2 x 3ml Syringes, recappable tips, tip case.
- **Value Pak:** 100 x 3ml Syringes, recappable tips, instructions.

Lapiss HP Hydrogen Peroxide Gel

- **5% Concentration:**
 - Ideal for moderate to heavy stains.
 - Ideal for patients with minimal history of thermal sensitivity.
 - Recommended Treatment: 30 minutes twice a day.
- **8% Concentration:**
 - Ideal for tetracycline stains, heavy tobacco stains and fluorosis.
 - Ideal for patients with no history of thermal sensitivity.
 - Recommended Treatment: 30 minutes per day or 2 x 15 minutes per day.

Available in the following presentations:

- **Standard Kit:** 5 x 3ml Syringes, recappable tips, tip case, tray case, 2 EVA sheets and a shade guide.
- **Mini Kit:** 2 x 3ml Syringes, recappable tips, tip case.
- **Value Pak:** 100 x 3ml Syringes, recappable tips, instructions.
